

IN THE CLAIMS:

Please amend the claims as follows:

1. (Cancelled)
2. (Cancelled).
3. (Currently Amended) A support rack for a plastic container having a content of at least 1.5 gallons of liquid comprising:
 - a wire body section, including at least two support members for engagement with at least two apertures in the plastic container;
 - a connecting section extending between the support members at first sides thereof; and
 - supporting sections extending from opposing second sides thereof of the support members for connection to a suspending support member; wherein the at least two support members are defined by two upwardly extending, essentially U-shaped members and the supporting sections are defined by an upper and lower leg section the upper leg disposed above the lower leg for connection to a suspending support member in a swivel manner, the support members, connecting section and supporting sections being coplanar and monolithic, the U-shaped members extending in a direction opposite the lower leg section.
4. (Currently Amended) A support rack for a plastic container having a content of at least 1.5 gallons of liquid comprising:
 - a wire body section, including at least two support members for engagement with at least two apertures in the plastic container;
 - a connecting section extending between the support members at first sides thereof; and
 - supporting sections extending from opposing second sides thereof of the support members for connection to a suspending support member; wherein the at least two support members are defined by two upwardly extending essentially U-shaped members and the supporting sections are defined by two spaced apart arm sections for connection to a wall surface

the connecting section being coplanar with the support members and the supporting sections extending essentially perpendicular from the support member.

5. (Cancelled)

6. (Currently Amended) A support rack for a plastic container having a content of at least 1.5 gallons of liquid comprising:
a wire body section, including at least two support members for engagement with at least two apertures in the plastic container; and
~~a connecting section extending between the support members at first sides thereof; and~~
supporting sections ~~extending from second sides thereof~~ for connection of the support members to a suspending support member; wherein the at least two support members are defined by a multiplicity of finger members the finger members constructed and arranged to support the plastic container on two of the finger members and the ~~connecting supporting~~ sections are defined by extensions of the finger members, the suspending support member defined by a single support arm.

7. (Currently Amended) The support rack as defined in claim 6, further including a rolling cart connected to the ~~extensions~~ supporting sections of the finger members.

8. (Original) The support rack as defined in claim 7, wherein the finger members include undulations.
